

Ozone Depleting Potential Statement

All classes of expanded polystyrene (EPS) manufactured by KOOLFOAM PTY LTD have an ozone depleting potential of ZERO.

CFCs Question

In order to make the polystyrene beads expand into the commonly recognised form, a gas is required. EPS has never used ozone depleting CFCs (chlorofluorocarbons).

The gas used for the purpose is the hydrocarbon pentane, which has no effect on the ozone layer.

Australian Standards Question

All classes of expanded polystyrene supplied by KOOLFOAM PTY LTD are manufactured to Australian Standards 1366 Part 3 - 1992.

The class supplied to the insulation industry is "S" class.
